

A MODERN WAY TO MANAGE RISK

THE PROBLEM

While the world of technical controls continues to evolve with the threat landscape, the tools needed to lead cyber programs effectively have not. Most organizations continue to utilize a compliance-based approach, while security leaders try to stitch together dozens of reports from dozens of vendors in hopes of communicating program status and insight into business decisions. Unfortunately, by the time this data is gathered from the various sources, it is often old, irrelevant, or flat out unavailable.

OUR SOLUTION

Quadrant offers a Gartner-recognized platform for Cybersecurity Maturity Assessments and Cybersecurity Performance Management, providing a unique and modern approach to supply security leadership with precise data and insights needed to inform business decisions. With real-time visibility into your overall control framework combined with live benchmarking, organizations receive insight into legal exposures and actual cyber requirements, letting you know precisely how much cybersecurity is “enough”.

KEY BENEFITS

- Intelligent Risk Identification
- Live Peer Benchmarking
- Real-time Program Visibility
- One-Click Reporting
- Industry Standards & Regulatory Overlays
- Unlimited Control Assessments
- Control Assignment & Tracking
- Compliance Program Integration
- Cyber Program Contextualization

OUR METHODOLOGY

1

Establish Protocols

Standard Selection / Control Rationalization

2

Implementation Design

Assign Your Control Responsibilities

3

Operationalize Your Program

Educate Your Teams And Establish Workflow

4

Gain and Track Insights

Track Status & Develop Roadmaps
